

New Forest Route Guide

Timetable Quick Start

- 1) From the Open Rails Menu choose a timetable. This will be the highest alpha numeric shown. Currently NfH7. Older timetables may be present for development, but are not advised
- 2) Choose a train. Trains are in start time order from midnight. Although OR has a facility to run trains through midnight, this is not used in Nf route. Trains with “Obs” in the title are observer trains. They are static and allow the player to simply watch trains. Don't choose “ECS,EGS, EVS” trains. They are empty and have no loco.
- 3) To help your choice there is a 1 line summary of the train activity

Click “start” and the timetable will load. There will be a 10-30 minute delay while the timetable executes the “prerun” phase. The prerun tracks the AI trains internally up to the player start time. Put the kettle on, feed the cat, sweep the floor.....
